Investment Treaties: Instruments of Bilateralism or Elements of an Evolving Multilateral System?

Stephan W. Schill∗

Abstract

The paper advances the paradoxical thesis that international investment law is developing towards a multilateral system of investment protection on the basis of bilateral treaties. Despite the infinite fragmentation of substantive investment law, coupled with arbitration as a decentralized dispute and compliance mechanism, one can observe convergence rather than divergence in this field of international law. Unlike genuinely bilateral treaties, BITs do not stand isolated in governing the relation between two States; they rather develop multiple overlaps and structural interconnections that create a relatively uniform and treaty-overarching legal framework for international investments based on uniform principles with little room for insular deviation. The paper therefore argues that BITs in their entirety function largely and increasingly analogously to a truly multilateral system. Elements of this thesis are the inclusion of most-favored-nation clauses, the possibilities of treaty-shopping through corporate structuring and the contribution of investor-State dispute settlement through the intensive use of precedent and other genuinely multilateral approaches to treaty interpretation.

I. Introduction

The development of international investment law on the basis of bilateral treaties contrasts significantly with the emergence of multilateral institutions in other areas of international economic law, in particular international trade and international monetary law. While multilateralism dominated international relations in these fields through the establishment of the GATT/WTO and the IMF, several approaches to establish a multilateral investment treaty have failed. Instead, international investment law is enshrined in currently over 2,500 bilateral, regional and sectoral investment treaties (collectively BITs). Furthermore, its compliance and dispute settlement mechanism does not rely on a uniform dispute settlement body, but rests on *ad hoc* arbitration panels with limited State oversight and without institutional mechanisms that ensure consistency and predictability in the decision-making process of arbitral tribunals.

This development suggests a chaotic and unsystematic aggregate of the law governing international investment relations. Rather than constituting a consistent and coherent system of law, one would expect an extreme divergence and fragmentation in this area of international cooperation. In fact, the fragmentation into bilateral treaties would make it impossible to understand this area of law as a system of law or perceive it as part of an overarching order for international economic relations. Instead, differentiated, preferential and discriminatory standards should be the result of bilateral treaty-making. Likewise, investment treaties would not establish uniform standards for the treatment of foreign investors by national administrations, the judiciary and the legislative. As a consequence, it would be impossible to develop theories and doctrines of the principles governing international investment protection.

However, what one can observe is a convergence, not a divergence in structure, scope and content of existing investment treaties. Unlike genuinely bilateral treaties,

---

BITs do not stand isolated in governing the relation between two States; they rather develop multiple overlaps and structural interconnections that create a relatively uniform and treaty-overarching regime for international investments. Likewise, the existing inconsistent decisions are not only relatively rare in number, but also arise more from diverging views about the proper application of standard investor’s rights and international law more generally rather than from the multitude and divergence of the underlying treaty regimes. This paper therefore argues that BITs in their entirety function increasingly analogously to a truly multilateral system. Instead of being prone to almost infinite fragmentation, international investment protection is developing into a uniform governing structure for foreign investment based on uniform principles with little room for insular deviation. Paradoxically, international investment law is therefore multilateralizing on the basis of bilateral treaties.

The argument, however, is not that bilateral investment treaties are wholly equivalent to a multilateral treaty; the argument is rather that the existing investment treaties, whether bilateral, regional or sectoral, can be understood as part of a treaty-overarching legal framework that backs up an international investment space that is part of the developing global market economy. The argument is also not that there is complete uniformity, but that there is enough convergence in order to be able to speak of international investment law as an existing international law discipline which is made up of uniform investment law principles, which is implemented through rather uniform institutional mechanisms and which follows rather uniform rationales.

In order to advance this thesis, the paper addresses a number of aspects that support that investment treaties and the principles of investment protection they contain follow multilateral rationales in their conclusion and application, even though they are enshrined in bilateral treaties. After revisiting the potential for fragmentation in international investment law, the paper considers the harmonizing effect of most-favored-nation clauses in investment treaties, addresses possibilities of investors to shop for the investment treaty that best meets their needs, and, finally, discusses which contribution investor-State dispute settlement as a compliance mechanism makes towards the progressive multilateralization of international investment law. In particular, arbitral tribunals employ several interpretative strategies that follow multilateral rather than
bilateral rationales and make intensive use of arbitral precedent, thus creating unity rather than fragmentation.

II. The Potential for Fragmentation in International Investment Law

Many observers of international investment law stress the existence of conflicting and inconsistent decisions produced by investment tribunals\(^3\) and thus echo the more general debate that considers the proliferation of dispute settlement mechanisms as one central factor for the fragmentation of international law, a debate which has ensued in the wake of the interpretative conflict that emerged between the International Court of Justice and the International Criminal Tribunal for the Former Yugoslavia concerning the attribution of actions of paramilitary groups to a State.\(^4\) In fact, seemingly inconsistent decisions in investment treaty arbitration have occurred with respect to several aspects of international investment protection, including the interpretation of standard elements of investment treaties such as most-favored-nation clauses or “umbrella clauses” that accord treaty protection to investor-State contracts and similar host State undertakings.

A. Multiplicity of Sources, Multiplicity of Proceedings

The potential for inconsistent and conflicting decisions in investment treaty arbitration, or more generally incoherence in the law governing international investment relations, is indeed abundant. Its causes can be found in the substantive as well as in the procedural law. Concerning substance, the fragmentation of sources of international investment law plays a significant role in disaggregating coherence. Due to the large number of BITs, one and the same State measure might be assessed differently under two existing investment treaties depending on the nationality of the investor affected. Different treaties might also contain different standards of investment protection, therefore resulting in differentiated protection of foreign investors.

Inconsistent decisions can also result from the possibility of having multiple proceedings relating to an identical set of facts that can arise from independent claims by

\(^3\) See, for example, FRANCK, The Legitimacy Crisis in Investment Treaty Arbitration: Privatizing Public International Law Through Inconsistent Decisions, 73 Fordham L. Rev. 1521 (2005).

shareholders at different levels of a corporate structure.\textsuperscript{5} Such a constellation led, for example, to conflicting decisions by two tribunals in \textit{CME v. Czech Republic} and \textit{Lauder v. Czech Republic}.\textsuperscript{6} Here, measures of the Czech Republic against a locally incorporated media company resulted in proceedings before two investment tribunals under two different BITs, one initiated by CME, the direct shareholder of the locally incorporated company, the other by Mr. Lauder, the controlling shareholder of CME. While the Tribunal in \textit{CME} found that the Respondent’s measures violated several provisions of the Dutch-Czech BIT and ordered it to pay in damages of approx. US$ 270 million,\textsuperscript{7} the Tribunal in \textit{Lauder} only found a minor breach of the U.S.-Czech BIT, but did not award damages due to remoteness.\textsuperscript{8}

\textbf{B. \hspace{1em} Fragmentation and \textit{ad hoc} Arbitration as a Dispute Settlement Mechanism}\\

Furthermore, the institutional design of dispute settlement under investment treaties based on \textit{ad hoc} arbitration is a threat to consistent decision-making in itself. Arbitral tribunals coexist without hierarchy and are not subject to appeals or any other form of external control by a supervisory body that could ensure consistency in the decision-making process.\textsuperscript{9} Furthermore, investment treaty arbitration also lacks a concept of \textit{de iure stare decisis} that could operate in producing consistent decisions.\textsuperscript{10} On the contrary, arbitral tribunals are free to adopt rulings that deviate from prior decisions by other tribunals.

Inconsistencies in investment treaty arbitration can result from differing assessment of law and facts by different tribunals. Two tribunals may, for example,

\begin{itemize}
  \item \textsuperscript{5} This results from the broad definition of “investor” and “investment” which accords standing to shareholders at various levels. See \textsc{Schreuer, Shareholder Protection in International Investment Law}, in: \textsc{Dupuy/Fassbender/Shaw/Sommerrmann (eds.), Common Values in International Law, Essays in Honour of Christian Tomuschat}, p. 601 (2006).
  \item \textsuperscript{6} See \textsc{Kühn, How to Avoid Conflicting Awards – The Lauder and CME Cases, 5 J. World Inv. & Trade} 7 (2004).
  \item \textsuperscript{7} \textit{CME Czech Republic B.V. v. The Czech Republic}, Partial Award of Sept. 13, 2001; Final Award of March 14, 2003 [all investment treaty awards are available at \url{http://ita.law.uvic.ca}].
  \item \textsuperscript{8} \textit{Lauder v. Czech Republic}, Final Award of Sept. 3, 2001, para. 235.
  \item \textsuperscript{9} See \textsc{Broches, Observations on the Finality of ICSID Awards, 6 ICSID Rev. – For. Inv. L. J.} 321 (1991).
  \item \textsuperscript{10} See only \textsc{Art. 1136(1) NAFTA; Article 53(1) ICSID Convention (both providing for the binding effect of awards between the parties to the proceeding only). Investment tribunals accept the lack of a rule of \textit{de iure stare decisis}, see \textsc{Kaufmann-Köhler, Arbitral Precedent: Dream, Necessity or Excuse?}, 23 Arb. Int’l} 357 (2007).
\end{itemize}
agree on the elements of necessity in international law, but disagree on whether the prevailing circumstances actually qualify as a state of necessity. Conversely, tribunals may disagree on the correct interpretation of the same provision in the same BIT. The Tribunals in *CMS v. Argentina* and *LG&E v. Argentina*, for example, reached different conclusions in applying the U.S.-Argentine BIT because they assumed a different legal relationship between necessity under customary international law and a specific emergency clause in the treaty and distributed the burden of proof for limiting elements differently.\(^11\)

Inconsistencies may also stem from conflicting views of tribunals concerning the construction of comparable treaty provisions in different treaties. While the Tribunal in *SGS v. Philippines*, for example, accepted that a provision in the Swiss-Filipino BIT constituted an umbrella clause and allowed the investor to bring contractual claims under the BIT, the Tribunal in *SGS v. Pakistan* denied such an effect to a similar provision in the Swiss-Pakistani BIT.\(^12\) Similarly, the interpretation of the scope of MFN clauses has resulted in diverging awards.\(^13\)

In sum, the sources for inconsistent decisions are numerous. The multiplicity of sources, the multiplicity of proceedings and the significant potential for inconsistent interpretations resulting from it should lead to a large degree of fragmentation of international investment law. In addition, the institutional structure of investor-State dispute settlement as *ad hoc* arbitration without significant external and internal control mechanisms should ensure that the contracting State parties to a BIT remain in control of the future of their bilateral treaty relations without being affected by the operation or interpretation of unrelated third-party BITs. At the same time, the inexistence of any hierarchy among investment tribunals and the lack of external control mechanisms, above all a standing appeals facility, aggravate the development of a uniform and consistent jurisprudence in the realm of international investment law. In essence, the potential for

---

\(^{13}\) See, for example, FAYA RODRIGUEZ, *The Most-Favored-Nation Clause in International Investment Agreements*, 25 J. Int’l Arb. 89 (2008).
inconsistencies in investment treaty arbitration is therefore an expression of bilateralism in international investment relations.

III. The Standardization of International Investment Treaties

The bilateral form of investment treaties suggests that the treaties differ significantly in content and structure and rather resemble *quid pro quo* bargains than uniform instruments governing international investment relations. However, international investment treaties generally conform to an archetype, converge in their wording and have developed a surprisingly uniform structure, scope and content.14 Almost all investment treaties provide for national treatment, most-favored-nation treatment, fair and equitable treatment and full protection and security, contain prohibitions on direct and indirect expropriation and grant the free transfer of capital. Finally, most investment treaties allow investors to initiate arbitration proceedings against the host State for violating the respective treaty.15 These similarities are particularly striking as one of the reasons why ordering international relations on a bilateral basis is preferable to multilateral ordering is the flexibility bilateral treaties offer to respond to specific needs and particularities.16

A. The Entrenchment of BITs in Multilateral Processes

In fact, the convergence of BITs is a the product of international planning by capital-exporting States. The similarities of BITs result from various processes on the international level that embed bilateral treaties within a multilateral framework and reflect an interest of States in establishing uniform investment rules. First, the convergence of treaty texts of many capital-exporting countries can be traced back to national model treaties that serve as a basis for the negotiation of BITs. Many countries, including Germany, the Netherlands, the United Kingdom, the United States, France and

---

Canada, use model BITs that are updated and refined on a regular basis.\textsuperscript{17} Although divergences between these model treaties and the BITs concluded on their basis occasionally occur, there is generally a close resemblance between the model draft and the final treaty.\textsuperscript{18}

Secondly, the convergence among the various national model treaties is based on their common historic pedigree. They have not been developed independently by the different capital-exporting countries, but go back to concerted efforts in the 1950s and 1960s to establish a multilateral investment treaty. In particular, the 1967 OECD Draft Convention on the Protection of Foreign Property had, although it never resulted in a binding instrument, a harmonizing effect for the BIT programs of the capital-exporting countries involved and often translated directly into the formulation of their respective model treaties.\textsuperscript{19} Consequently, the use of model treaties did not only serve the purpose of facilitating the negotiations about the content of a BIT and thus of reducing their drafting and negotiation costs, but aimed at ensuring a certain level of uniformity in investment treaty negotiation and conclusion.

The link between BITs and other multilateral developments can also be illustrated concerning the Fourth Lomé Convention between EC Member States and 68 developing countries from the African, Caribbean and Pacific region. The Convention did not only affirm the importance of concluding investment treaties between the contracting parties,\textsuperscript{20} but also determined some of the content of these agreements\textsuperscript{21} and thus ensured their homogeneity.

\textsuperscript{17} Various model BITs of Austria, Denmark, Germany, Hong Kong, the Netherlands, Switzerland, the United States, and the United Kingdom, are reprinted in DOLZER/STEVENS (supra note 15), pp. 165 et seq.

\textsuperscript{18} See VANDEVELDE, A Brief History of International Investment Agreements, 12 U.C. Davis J. Int'l L. & Pol'y 157, 170 (2005).

\textsuperscript{21} Annex LIII of the Final Act concerning the Lomé Convention, 29 ILM 802 (1990).
B. Bilateralism, Hegemony and Fragmentation

Possibly, the content of BITs could be solely a function of the hegemonic behavior of developed capital-exporting countries vis-à-vis their capital-importing counterparts.\(^\text{22}\) If this was the case, the apparent convergence of international investment treaties would merely conceal that BITs in fact endorsed preferential benefits of stronger vis-à-vis weaker capital-exporting States. It would be likely that stronger capital-exporting States seek specific benefits in BITs in relations to other competing capital-exporters, just as States in the inter-war period have used their negotiating power in bilateral economic relations to ensure advantages over competing powers by concluding protectionist regimes with weaker States.\(^\text{23}\)

However, investment treaties are grounded on notions of equality and non-discrimination, reflected above all in the principles of national and most-favored-nation treatment. In addition, they apply the same standards to capital-importing and capital-exporting countries. Although this left capital-exporting countries initially largely unaffected due to the primarily unidirectional flows of capital from developed into developing countries, the directions of these flows are becoming increasingly bidirectional. Similarly, the expanding number of South-South BITs,\(^\text{24}\) concluded between developing countries, which endorse the same standard terms, suggests that the content of investment treaties is increasingly considered as constituting an appropriate balance between investment protection and State sovereignty.\(^\text{25}\) Certainly, hegemonic elements were at play when developed States switched from multilateral to bilateral negotiation settings, with different relative negotiation powers at play.\(^\text{26}\) Yet, this hegemonic element did not result in preferential or discriminatory investment protection standards. Instead, investment treaties are based on notions of non-discrimination that

subject all States, including capital-exporting States, to the same standards of investment protection.

The reason for the convergence of BITs is arguably that uniform and universal rules are in principle in the interest of all States. The hypothesis, in this context, is that uniform rules governing international investment relations are not only beneficial for developed countries as a group, but are in the interest of every single State, whether developed or developing. Such an explanation for the convergence of investment treaties would repose on the crucial role uniform rules have for the creation of a level-playing field that enables investment to flow in a global economy to wherever capital is most effectively allocated. Uniform standards are particularly salient as they are the prerequisite for competition in a global market. From this point of view, establishing uniform rules is in the long-term interests of all States and explains why bilateral investment treaties are so similar and can be seen as a substitute for a single multilateral investment treaty.

IV. Multilateralization through Most-Favored-Nation Clauses

The interest of States in creating uniform rules for investment protection also surfaces in the BITs themselves. An express basis for the multilateralization of investment relations are most-favored-nation (“MFN”) clauses incorporated in almost every treaty. With some variations, these clauses are reciprocal, unconditional and indeterminate.27 They require to “treat investments and activities associated with investments in its own territory . . . on a basis no less favourable than that accorded to investments and activities associated with investments of nationals of any third country.”28 MFN clauses break with general international law and the bilateralist rationale that permits differential treatment of different States and their nationals.29 They oblige the State granting MFN treatment to

27 See ACCONCI, The Most Favoured Nation Treatment and the International Law on Foreign Investment, 2(5) TDM 2005, pp. 6 et seq.
28 Art. 3(c) of the BIT between Australia and the People's Republic of China of 11 July 1988.
extend to the beneficiary State any more favorable treatment accorded to third States\(^\text{30}\) and thus require non-discrimination between the beneficiary and any third State.

Although MFN clauses constitute inter-State obligations, they extend MFN treatment directly to covered investors in the context of investment treaties. An investor covered by a BIT which includes an MFN clause (the so-called basic treaty) can therefore invoke the benefits granted to third-party nationals by another BIT of the host State and have them applied to its relationship with the host State. Consequently, MFN clauses multilateralize the bilateral inter-State treaty relationships and harmonize the protection of foreign investments in a specific host State. They prevent States from shielding bilateral bargains from multilateralization and disable them to make exclusive or preferential promises to specific States and its nationals.

A. The Multilateralization of Substantive Investment Protection

The application of MFN clauses to import more favorable substantive conditions from third-country BITs is largely uncontested. Several tribunals held that MFN treatment would apply to incorporating more favorable substantive investment protection from third-party BITs. Already in the first known investment treaty dispute the Tribunal in *Asian Agricultural Products v. Sri Lanka* accepted the general proposition that an investor covered by the basic treaty could rely on more favorable substantive conditions granted in another host State BIT.\(^\text{31}\) The extension of substantive rights by means of an MFN clause was also accepted in *Pope & Talbot v. Canada*,\(^\text{32}\) in *MTD v. Chile*,\(^\text{33}\) and in *Rumeli Telekom v. Kazakhstan*,\(^\text{34}\) and is therefore firmly accepted.

B. The Multilateralization of Access and Scope of Investor-State Arbitration

Yet, the operation of MFN clauses is not limited to substantive investor’s rights. In arbitral practice, the MFN clause has also been interpreted so as to encompass more

\(^{33}\) *MTD Equity Sdn. Bhd. & MTD Chile S.A. v. Republic of Chile*, Award of May 25, 2004, paras. 100 et seq., 197 et seq.

favorable conditions concerning the dispute settlement mechanism under BITs. In *Maffezini v. Spain*, for example, the Tribunal held that, by means of an MFN clause, the Claimant was not bound by a waiting period contained in the basic treaty, but could rely on more favorable conditions in Spain’s third-party BITs that allowed initiating investor-State arbitration more quickly.\(^{35}\)

While the application of MFN clauses to questions concerning the admissibility of investor-State claims has been uniformly accepted in arbitral jurisprudence,\(^ {36}\) it is contentious whether MFN clauses can also broaden the jurisdiction of a tribunal.\(^ {37}\) The Tribunal in *Plama v. Bulgaria* declined such an argument.\(^ {38}\) While the arbitration clause in the basic treaty only provided for *ad hoc* arbitration concerning the amount of compensation for expropriation, other host State BITs provided for more comprehensive investor-State arbitration. The Tribunal held, however, that in order to benefit from the broader consent in subsequent BITs, the MFN clause needed to encompass investor-State ...

dispute settlement explicitly. It emphasized that “the reference must be such that the parties’ intention to import the arbitration provision of the other agreement is clear and unambiguous.”

However, it is questionable whether the argument for the restrictive view on the scope of application of MFN clauses is sustainable. The main reason for being skeptical in this respect is that the provisions on investor-State dispute settlement are arguably the most important rights accorded to foreign investors, because they effectively allow enforcing compliance with the host State’s obligations under an international investment treaty. It would, thus, appear to be surprising if States that agree to MFN treatment for foreign investors would exclude from its scope of application the most important right, i.e., the right to initiate investment arbitration. Accordingly, a recent decision has accepted that MFN clauses can also apply to incorporating broader consent to investor-State arbitration in third-party BITs.

What remains, independent of which line of argument will prevail in future cases, is that MFN clauses have a significant effect for the multilateralization of bilateral investment relations. They level the inter-State relations between the host State and various home States that have entered into bilateral investment agreements and push the system of international investment protection further towards multilateralism. Overall, MFN provisions in BITs have the effect of reducing leeway for specificities in bilateral investment relations and consequently undermine the understanding of BITs as an expression of *quid pro quo* bargains. MFN clauses thus form part of the ongoing process of a multilateralization of international investment relations and constitute a counter-development to the apparent fragmentation of international investment law.

---

40 *Cf. Gas Natural v. Argentina (supra note 36)*, para. 49.

V. Corporate Nationality and Treaty-Shopping

Unlike genuine multilateral treaty regimes, the scope of application of BITs is restricted *ratione personae* to investors that have the nationality of the other contracting Party. Inclusion into and exclusion from a treaty’s protection therefore depends on the bond of nationality between the investor and its home State providing a strong counterargument against the thesis that the BIT regime develops towards a multilateral system that imposes uniform obligations upon States.

A. Nationality as the Gateway to Investment Protection

Nationality as the decisive factor for inclusion or exclusion of a specific investor from the protection offered by a BIT is, however, becoming an increasingly elusive criterion as States have difficulties in limiting the protection of BITs to a specific bilateral relationship. The reason for this stems mainly from the broad definition of investor that does not only comprise natural persons, but also covers corporate investors. While the nationality of natural persons is relatively stable and not subject to easy and frequent changes, corporate structures can change their nationality quickly and at little cost by migrating to another jurisdiction or by setting up a corporate subsidiary there. This effectively allows investors to change their nationality for purposes of investment protection, by hiding behind the corporate veil and structuring their investment so that they are covered by the investment treaty they prefer. This involves a large potential for “treaty shopping”, a fact that undermines understanding investment treaties as expressions of bilateral bargains, because an investor can opt into almost any BIT regime it chooses. The interplay between investment protection, corporate law and corporate structuring, thus has a profound influence on the multilateralization of international investment law.

Above all, arbitral tribunals have so far declined to take a look behind the corporate veil in order to determine the nationality of corporate investors according to the nationality of its shareholders and hinge instead on either the place of incorporation or the

---

42 International law does, however, require that a sufficiently “genuine link” between the individual and the State granting nationality exists in order for the foreign nationality to be recognized by other countries. See Nottebohm Case, I.C.J. Reports 1955, pp. 4, 20 *et seq.*
corporate siège social. They have thus accepted to view corporate vehicles as investors and accorded them protection under “their” home State BIT, even though the controlling shareholders might be covered by a different or no investment treaty with the host State at all.

B. Changing Corporate Nationality: Hiding Behind the Corporate Veil

Arbitral jurisprudence has accepted such treaty-shopping in a number of different situations. In Aguas del Tunari v. Bolivia, the Tribunal accepted that an investment that was originally not protected by an investment treaty, because the investor’s home State had not entered into a BIT with the host State, could be brought under BIT protection by changing the corporate structure and interposing an entity that was covered by an investment treaty.

Likewise, arbitral jurisprudence has accepted that dual nationals can hide behind the corporate veil of a company incorporated in the State of one of their nationalities. In Champion Trading v. Egypt, the Tribunal accepted that dual nationals who were denied standing under Art. 25(2)(a) ICSID Convention could bring claims by structuring their investment through a company incorporated in one of their States of nationality.

Finally, in Tokios Tokelés v. Ukraine the Tribunal even accepted that nationals of the host State could, by means of corporate structuring, hide behind a corporate structure incorporated in another jurisdiction and thus bring their investment under the protection of the BIT with the company’s home State. While the Respondent argued that

43 The control theory, by contrast, that determines the corporate nationality according to the nationality of the controlling shareholders is rather exceptional. See DOLZER/STEVENS (supra note 15), pp. 34 et seq.; SINCLAIR, The Substance of Nationality Requirements in Investment Treaty Arbitration, 20 ICSID-Rev.-For. Inv. L. J. 357, 368-378 (2005).

46 Tokios Tokelés v. Ukraine, Decision on Jurisdiction of April 29, 2004, paras. 21 et seq. See on the case also BURGSTALLER, Nationality of Corporate Investors and International Claims against the Investor’s Own State, 7 J. World Inv. & Trade 857 (2006).
“find[ing] jurisdiction in the case would be tantamount to allowing Ukrainian nationals to pursue international arbitration against their own government”, 47 the Tribunal’s majority concluded that the definition of investor in the BIT also comprised such constellations of reinvestments. 48

The possibility of corporate structuring shows above all that ordering international investment relations on a truly bilateral basis with rights and benefits only accruing to nationals of one specific home State is an increasingly illusionary undertaking, since the nationality of corporate investors has become as fungible as capital in global markets. Corporate structuring multilateralizes investment treaties because virtually any investor from virtually any country is capable of opting into virtually any BIT regime.

Similarly, access and exit from the BIT regime resembles a multilateral treaty regime if corporate structuring is taken into account. Thus, access to investment protection in a specific host State can become operative through a single BIT. Conversely, corporate structuring restricts selective exits from investment protection in relations to specific States. Instead, effective exit from international investment protection is only possible if a host State terminates all of its investment treaties as investors can always bring their investment under the protection of a different BIT simply by restructuring through a corporate intermediary covered by a different BIT.

In sum, multi-jurisdictional structuring therefore shows that bilateralism as an ordering paradigm for international investment relations is unfeasible, because investors can virtually opt for the BIT regime they prefer. Although the possibility of treaty-shopping per se suggests that there are relevant differences between investment treaties, treaty shopping also shows that a treaty-overarching regime or system of international investment law develops independently of the actual uniformity in content of bilateral investment treaties and independent from the inclusion of most-favored-nation clauses.

47 Tokios Tokeles v. Ukraine (supra note 46), para. 22.
VI. Multilateralization Through Investment Treaty Arbitration

The multilateralization of international investment law is further effectuated by the introduction of investor-State arbitration as a mechanism for settling disputes under BITs. By granting investors the right to initiate arbitration and thus enforce host State compliance with the treaties, leeway for inter-State negotiations about the consequences of BIT breaches after a dispute has arisen is virtually abolished. This excludes bilateral post-breach bargaining and ensures that investment treaties are enforced independent of the relative power relations between host and home State. Apart from its compliance function, investor-State arbitration also empowers tribunals to function as law-makers for the entire investment treaty regime.

A. Investment Treaty Arbitration as a Compliance Mechanism

Traditional international law allowed States to flexibly negotiate around the consequences of breaches of international obligations, if this was in their interest and was achievable in view of their bargaining power. Inevitably, this flexibility could lead to contortions in the competition between investors depending on their national origin. Access to investor-State arbitration, by contrast, ensures that investors are able to enforce investment treaties against States independently of their home State’s relative power. This does not only consolidate international investment law as a functioning legal regime, but also ensures that the general and uniform principles that investment treaties establish are implemented without contortions in the enforcement stage. Investor-State arbitration thus restricts bilateralism in the enforcement of investment treaty obligations by removing the power of States to defect from their treaty obligations based on bargaining with the investor’s home State.

49 See, for example, the practice of lump-sum agreements in settling claims for the violation of alien property Lillich/Weston, International Claims: Their Settlement by Lump-Sum Agreements (1975); Weston/Bederman/Lillich, International Claims: Their Settlement by Lump-Sum Agreements 1975-1995 (1999).

In addition to that, the ICSID Convention, which governs most BIT disputes,\textsuperscript{51} constitutes a multilateral convention. Consequently, it subjects investor-State disputes, independent of the governing investment treaty, to the same procedural rules and imposes equal transactions costs on dispute settlement and enforcement of investment treaty obligations. This adds to the idea that investment treaties form the basis of an international economic order for the global economy that is based on market mechanisms and equal competition among investors from different home States, enabling investment to flow to wherever capital is allocated most efficiently. Multilateral rules for investment arbitration respond to this objective by creating a level-playing field for the settlement of disputes and the enforcement of substantive investment protection.

Furthermore, the multilateral rules in the ICSID Convention on the recognition and enforcement of investment treaty awards respond to the necessity of implementing an arbitral award effectively across several jurisdictions. It provides for the recognition of arbitral awards in all of the Member States of the ICSID Convention and thereby transforms the effect of an award rendered pursuant to the rules of a specific BIT into a case-specific obligation that has to be complied with by all Member States of the Convention.\textsuperscript{52} This makes it more difficult for respondent States to frustrate the enforcement of the award in its own territory by enabling investors to enforce it against assets the host States holds in third States, such as bank accounts. By automatically recognizing ICSID awards as final and binding in all Member States jurisdictions, the ICSID Convention thus elevates the enforcement of awards from the bilateral to the multilateral level.

B. Investment Treaty Arbitration as Investment Law-Making

Investor-State arbitration does, however, not only contribute to the multilateralization of international investment law because of its function as a compliance mechanism. It also multilateralizes investment law because investment treaty arbitration assumes a

\textsuperscript{52} See Art. 54 ICSID Convention.
significant norm-generative function.\textsuperscript{53} This mainly results from two factors: the institutional structure of investment treaty arbitration and the vagueness of the substantive provisions of investment treaties.

Investor rights such as fair and equitable treatment, full protection and security, indirect expropriation or national treatment leave a wide margin of discretion to arbitral tribunals. In fact, these standard investor rights can rather be understood as “general clauses” that delegate substantial rule-making power to judicial bodies.\textsuperscript{54} In turn, arbitral tribunals emerge as the essential law-makers in international investment law when transforming the broad principles of international investment law into more precise rules that affect the executive, the legislative and the judiciary of the host State in their activities.

The power-shift from States to tribunals becomes all the more visible in view of the restrictive possibilities that States have in influencing the direction of investment jurisprudence. Limited possibilities in influencing the appointment of arbitrators, the arbitral process and the enforcement of arbitral awards leave only limited leeway to counterbalance the authority that investment tribunals exercise. Similarly, the power to react to what States might perceive as mistaken jurisprudential developments through the modification of treaties is limited, as treaty adjustments require the consent of all States concerned.

Investor-State arbitration is, however, not only a threat to State sovereignty and to the legitimacy of this form of dispute settlement. The norm-generative function of investment arbitration also adds to the multilateralization of international investment law. It helps to resolve uncertainty about the vagueness of many standard investor’s rights and to “fill gaps” in investment treaties. This enables States to enter into long-lasting and stable investment relations that are not obstructed by continuous bilateral bargaining every time the broad principles have to be concretized for specific areas of State conduct.

Investor-State arbitration thereby responds to the need to solve uncertainty and ambiguity in international investment relations, to stabilize them over time, and to adapt them to changing realities.\textsuperscript{55} Most notably, the function of concretizing existing and generating new investment law is not limited to a specific investment treaty that governs a dispute submitted to arbitration, but affects the interpretation of investment treaties in general.

VII. Multilateralization Through Interpretation and Use of Sources

Tendencies to a multilateralization of international investment law are also visible in the practice of arbitral tribunals, above all in the way they interpret and construe investment treaties. Most notably, tribunals do not interpret and construe BITs according to methods characteristic for the interpretation of bilateral treaties, but employ rationales that suggest the existence of an overarching body of international investment law that has merely found its expression in bilateral treaties. Namely, the frequent use of references to prior arbitral awards and third-party investment treaties is significant in this respect. In doing so, investment tribunals translate the similarities of bilateral treaties into multilateral reality beyond the existing elements of multilateralism.

A. Interpretation in pari materia

Departing from a strict bilateral focus in interpreting BITs, arbitral tribunals frequently use, “cross-treaty interpretation” or “interpretation in pari materia”, i. e. reference to third-party treaties that are not binding upon the parties involved in an investment dispute,\textsuperscript{56} in order to interpret and apply the governing treaty. This has the effect of creating uniformity in treaty interpretation and embeds BITs in a treaty-overarching framework. Even though the third-party treaties do not become sources of law properly speaking, they nevertheless inform the interpretation of the governing treaty in question. This has a multilateralizing effect as the strict emphasis on the bilateral relationship in treaty interpretation is abandoned. Instead, investment treaties are treated as if they

emanate from a single source and form part of a body of investment law principles that is applicable rather independently from the governing treaty.

The validity of this method of BIT interpretation was already recognized in Asian Agricultural Products v. Sri Lanka where the Tribunal considered it “proper to consider stipulations of earlier or later treaties in relation to subjects similar to those treated in the treaty under consideration”. Subsequently, this approach played a role in various decisions. In Maffezini v. Spain, for example, the Tribunal took into account the general BIT practice of the contracting State parties in interpreting an MFN clause. In Plama v. Bulgaria, the Tribunal drew an argumentum e contrario from third-country treaties in order to support a narrow interpretation of an MFN clause. Similarly, many other cases of interpretation in pari materia can be observed. This suggests that arbitral tribunals perceive that BIT practice in general forms part of the sources of international investment law that can be used for guidance in interpreting a specific investment treaty.

B. The Use of Precedent

Investment tribunals also use arbitral precedent in an extensive way. Far from constituting a subsidiary source of international law as envisaged by Art. 38(1)(d) ICJ-Statute, precedent has become both quantitatively as well as qualitatively the premier determinant for the outcome of investor-State disputes. Even though arbitral precedent is considered to be non-binding, it has a considerable de facto force in shaping the interpretation of BITs to the extent that divergences in investment jurisprudence are rather rare. Notably, even in cases of conflicting decisions, tribunals employ various strategies to uphold consistency in investment treaty arbitration. These strategies include the distinction of cases based on differences in the underlying facts and differences in the

58 Maffezini v. Spain (supra note 35), paras. 52 et seq.
wording of the governing BITs,\textsuperscript{60} concealing dissent\textsuperscript{61} and reconciling seemingly conflicting decisions based on conflict rules about principles and exceptions.\textsuperscript{62} System-consistency is thus clearly a concern that influences and drives investment treaty jurisprudence despite the existence of a myriad number of BITs. Comparable to the use of cross-treaty interpretation, the use of precedent reinforces the view that international investment law is based on a uniform order that overarches individual bilateral treaties. It also creates intra-system communication and consistency and secures that differences in jurisprudence are addressed and dealt with. Again, inconsistent decisions exist, but they are not so pervasive as to invalidate the observation of predominant consistency in the jurisprudence of investment tribunals.

References to ICSID decisions can be found in nearly all of the more recent ICSID decisions on jurisdiction and awards on the merits. A recent quantitative citation analysis, for example, concluded that “citations to supposedly subsidiary sources, such as judicial decisions, including arbitral awards, predominate.”\textsuperscript{63} Although tribunals regularly emphasize the non-binding nature of precedent, they nevertheless primarily turn to earlier decisions for guidance.\textsuperscript{64} The Tribunal in \emph{El Paso v. Argentina}, for example, stated that it would “follow the same line [as earlier awards], especially since both parties, in their written pleadings and oral arguments, have heavily relied on precedent.”\textsuperscript{65} The way the parties to disputes rely on precedent therefore suggests the emergence of expectations that tribunals will decide cases not by abstractly interpreting the governing

\textsuperscript{60} \emph{Salini v. Jordan} (supra note 39), paras 102 et seq.

\textsuperscript{61} See, for example, \emph{LG&E Energy Corp., LG&E Capital Corp., LG&E International Inc. v. Argentine Republic}, Decision on Liability of Oct. 3, 2006 (where the tribunal repeatedly cited \emph{CMS v. Argentina} in support of its interpretation of fair and equitable treatment or the application of the umbrella clause, \textit{ibid.}, paras. 125, 128, 171, but failed to mention that this decision reached a contrary result concerning the necessity defense, \textit{ibid.}, paras. 204-266).

\textsuperscript{62} \emph{Plama v. Bulgaria} (supra note 38), para. 217 et seq.

\textsuperscript{63} \textit{COMMISSION, Precedent in Investment Treaty Arbitration – A Citation Analysis of a Developing Jurisprudence}, 24 J. Int’l Arb. 129, 148 (2007).

\textsuperscript{64} See also \textit{KAUFMANN-KÖHLER, Arbitral Precedent: Dream, Necessity or Excuse?}, 23 Arb. Int’l 357 (2007).

\textsuperscript{65} \emph{El Paso Energy International Company v. The Argentine Republic}, Decision on Jurisdiction of April 27, 2006, para. 39. See also \emph{AES v. Argentina} (supra note 10), para. 18.
BIT, but by embedding their interpretation into the preexisting structure and content of the discourse shaped by prior investment treaty awards.\(^{66}\)

The material influence of precedent becomes apparent, for example, in the NAFTA award in *Waste Management v. Mexico*, where the Tribunal extensively described earlier investment awards regarding fair and equitable treatment in order to extrapolate a case-sensitive definition of this standard. The importance of precedent is ever more imposing, as the Tribunal did not critically analyze earlier decisions and their arguments, but merely endorsed their holdings, similar in style to the common law system of *stare decisis*. The Tribunal thus defined the standard of fair and equitable treatment by recurring to earlier NAFTA decisions. It observed:

> “Taken together, the *S. D. Myers, Mondev, ADF* and *Loewen* cases suggest that the minimum standard of treatment of fair and equitable treatment is infringed by conduct attributable to the State and harmful to the claimant if the conduct is arbitrary, grossly unfair, unjust or idiosyncratic, is discriminatory and exposes the claimant to sectional or racial prejudice, or involves a lack of due process leading to an outcome which offends judicial propriety – as might be the case with a manifest failure of natural justice in judicial proceedings or a complete lack of transparency and candour in an administrative process.”\(^{67}\)

Thus, what primarily mattered for the Tribunal in the application of fair and equitable treatment was the application of the facts of the case to the standard developed from earlier NAFTA decisions, not the interpretation of the treaty text itself.\(^{68}\) Similar developments can be traced with respect to almost all standards of investment protection.

The contribution investment jurisprudence makes towards a multilateralization of international investment law is most apparent when juxtaposing the emerging common law of investment arbitration with the traditional view of the effects of bilateral treaties

\(^{67}\) *Waste Management, Inc. v. The United Mexican States*, Award of Apr. 30, 2004, para. 98.

\(^{68}\) *Ibid.*, paras. 99 et seq.
and bilateralist methods of treaty interpretation. From a bilateralist perspective making use of precedent in cross-treaty cases and referring to third-parties treaties as an interpretative aid would be seen as a violation of the *inter partes* effect of international treaties, since the third-party treaty is indirectly accorded normative weight. Clearly, if third-party treaties are used as an interpretative aid, this can amount to either creating new or reducing existing obligations under investment treaties. Likewise, the extensive reliance on precedent could be opposed to as a violation of the traditional doctrine of sources of international law, because precedent is not applied as a subsidiary source of international law, but rather as the primary framework of reference in investment treaty arbitration. It can, however, be reconciled with the principles of treaty interpretation, if one assumes that the regime established by the aggregate of 2,500 BITs forms part of “any relevant rules of international law applicable in the relations between the parties” in the sense of Art. 31(3)(c) of the Vienna Convention on the Law of Treaties.

**VIII. Conclusion**

Most international treaties order the relations between two States only. They create mutual rights and obligations and coordinate State behavior on a bilateral basis. While allowing for flexible solutions depending on the specific situation and interests of the States involved, bilateralism also inhibits the emergence of an international community. It puts the State, its sovereignty and its consent to the creation of international law center stage and secures the precedence of State interests over interests outside or beyond its realm. This fortification of the State coined the traditional understanding of international law as it developed throughout the 19th and most of the 20th century. It characterized its doctrine of sources by strictly focusing on State consent, it denied international law subjectivity to non-State actors, and *de facto* linked the enforcement of international law with a favorable distribution of power in a non-hierarchical order.

Multilateralism, by contrast, assumes the existence and legitimacy of interests of an international community beyond the interests of States. It orders inter-State relations on the basis of general principles that establish a general framework for the interactions

---

among States and their citizens. It aspires towards universal validity and application and views States as being embedded within the structure of an international community. Following World War II, multilateralism as an ordering paradigm for international relations became increasingly important in a number of fields, in particular international human rights, international security and international trade. It left a significant imprint on the structure and nature of international law by recognizing the limitations of State sovereignty in view of interests and values of an international community. The recognition of *jus cogens*, the development of international criminal law, or the increasing importance of humanitarian interventions, are just a few examples that illustrate this development.

Typically, multilateralism is implemented on the basis of multilateral treaties that “serve as the vehicle *par excellence* of community interest”. They base relations of States on general non-discriminatory principles and thereby create legal institutions around which the expectations and conduct of States and their citizens can evolve. However, multilateralism can also develop and be implemented on the basis of bilateral treaties. In the realm of international investment protection, bilateral rather than multilateral treaties are creating the institutions necessary for the development and stabilization of a global economy. Similar to multilateral treaties, BITs order international investment relations on the basis of general principles that are relatively uniform across the myriad number of bilateral treaty relationships. They do not constitute *quid pro quo* bargains, but establish a uniform legal framework that stabilizes and structures the economic activity of foreign investors and requires host States to conform their behavior to rule of law standards that enable market forces to unfold.

Along these lines, this paper has argued that international investment law is evolving towards a multilateral system based on bilateral treaties. This understanding has an impact on practical questions of BIT interpretation that should conform to multilateral rather than bilateral rationales and provides a justification for the heavy use of precedent. More importantly, however, the understanding of investment protection as a multilateral system forms the basis for other theoretical projects that concern the function of

---

70 *Id.*, at 323.
investment treaties in a global economy. It is the precondition for understanding the BIT regime as a uniform body (or system) of law and, thus, forms the theoretic basis for projects embedding investment treaties into the global administrative law project\(^7^1\) or advancing the thesis that international investment law is in a process of evolving constitutionalization.\(^7^2\)
